

**Meo Limited** was incorporated in Hong-Kong, in July 2012. Since that date it has focused on environmental research & development.

We want to provide awareness about our environment. In particular, we want to highlight factors that impact our **well-being**, and how we can act on our exposure to them, in order to improve our life.

Having continuously improved the prototype through 4 iterations, we now have a **unique solution** ready for production and targeted to both Consumers and Corporate.

We are raising funds for production launch as well as for the relevant marketing campaign to gain visibility. We are looking for investors that are like-minded, and who understand the community need for such a solution due to increased concern about the environment.

**Blue** is the first solution designed by Meo Limited. It includes the device, an App on iOS and Android, and a website, all connected to a cloud, providing you an integrated, multi- channel solution.

Both the hardware and software have been continuously refined, thanks to Meo's skilled team, to deliver a true **user experience**, despite the highly technical nature of the solution.

To enhance the user experience and product's aesthetic appear, Meo paired with renowned **French designer** – Philippe Nigro, for **blue**.

Under the cover, all optimization has been pushed to keep energy management to the most efficient synchronized with in the device operating in portable and static mode. Moreover, Meo Limited filed for **patent** protection in April 2016, of these innovations embedded within the device. Wireless connectivity is also at the heart of **blue's** unique design, with the device being able to recognize familiar locations and connect to known Wi-Fi or the owner's smart phone, all with **privacy** and **security** in mind for every transmission of data.

**Blue** is your portable and personal **air quality guide**. It gives you real-time US EPA scaled information on pollutants around you.

It will **notify** users when dangerous levels are reached, and what could be done in order to reduce levels, whether you are indoor or outdoor.

**Blue** also communicates on known protocols with home appliances to optimize their use.
